

AssetGen Professional – Download and Installation Instructions

The link on the web site is to a self-extracting Zip file which contains all the installation files. On clicking the link a dialog box will be displayed:

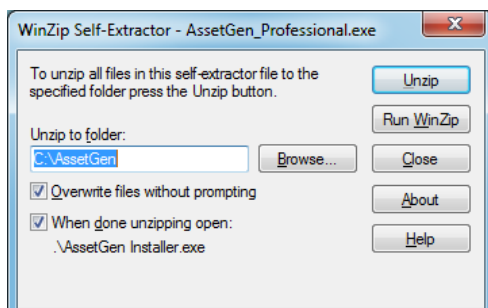

Run Downloads the file and runs the extraction process.

Save Saves the file **AssetGen_Professional.exe** to your system. You will be prompted for a location.

After download the process will offer you the chance to run the file extraction. Alternatively, you can complete the extraction process later by double clicking the downloaded file.

Cancel Stops the download process

The extraction process displays the following dialog box:

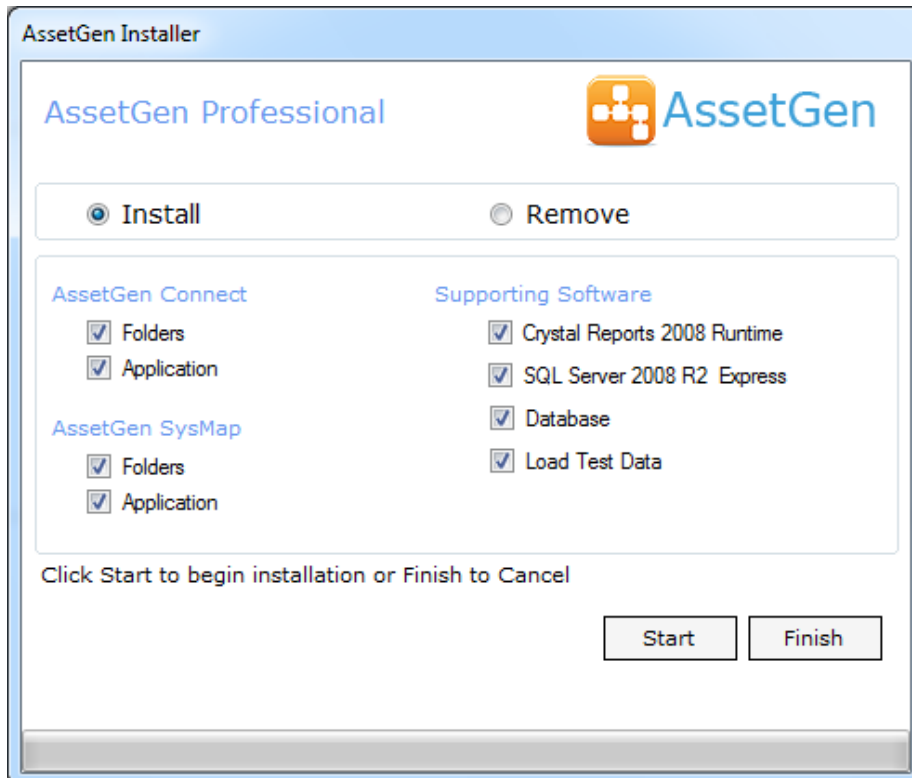

The file location for the Installer files can be changed if required.

If you have not selected the option that invokes the installer automatically you will need to start the setup program, *AssetGen Installer.exe* manually.

Note: There are some known issues with the installation of SQL Server Express. Please contact us if you encounter any problems and we will endeavour to help.

We recommend that the evaluation software is installed on a dedicated PC or Virtual Workstation to avoid any problems with existing applications using other versions or instances of SQL Express.

The Installer program will display the following screen:

By default both AssetGen Connect and SysMap Professional editions are installed. If you only wish to evaluate one of these products, uncheck the relevant Folders and Application checkboxes. The applications can be installed at a later date by re-running the installer.

Leave all the Supporting Software default options checked and click Start to install. The program will display various progress dialogs as the applications and supporting software are installed.

Once the installation is completed click the Finish button to close the setup window.

To run an application, click the desktop icon that was installed during setup.

Note: On the first run you will be asked for a licence key. A 30 day evaluation key should be requested via the contact page on our website (http://www.assetgen.com/contact_us.html).

Visio™ If you wish to test the drawing capability you will need to have Microsoft Visio 2007 or 2010 installed on the same PC. We strongly recommend the use of the Professional version in both cases as it has enhanced features that AssetGen can utilise.
